

MATCHING

Draw a line from the equipment name to the corresponding definition.

Grinder

Machine used for blending the ingredients for concrete.

Bull float

Rotating wheel that is applied to the concrete surface to remove the top layer.

Saw

Wood or metal bar used for determining a true horizontal or vertical by centering an attached bubble in a glass tube.

Mixer

Temporary structure or mold that supports or encloses the concrete while it is setting.

Backhoe loader

Tool, sometimes powered, with a toothed steel blade for cutting concrete.

Form

Large, flat, rectangular piece of wood or magnesium with a long handle. Used to smooth surfaces of freshly placed concrete.

Level

Machine equipped at its front end with a bucket for loading, and at its rear with a bucket for digging.
